Introduction

Components

Item No.	Description	
1	Red Output Window (Laser Aperture)	
2	Trigger	
3	Pinhole for Cable Release (see page 3)	
4	10-Pin RJ45, Female Socket	
5	Beeper Hole	
6	LED Indicator (see page 5)	

Figure 1. Scanner Components

Maintenance

Smudges and dirt on the unit's window can interfere with the unit's performance. If the window requires cleaning, use only a mild glass cleaner containing no ammonia. When cleaning the window, spray the cleaner onto a lint free, non-abrasive cleaning cloth then gently wipe the window clean.

If the unit's housing requires cleaning, use a mild cleaning agent that does not contain strong oxidizing chemicals. Strong cleaning agents may discolor or damage the unit's exterior.

Caution and Serial Number Labels

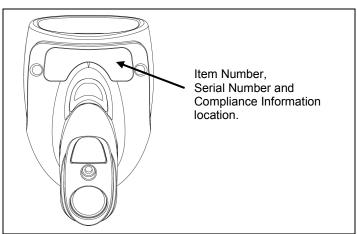

Figure 2. Label Location on the Bottom of the Scanner

Cable Installation and Removal

Installation

- 1. Insert the cable's modular connector into the socket on the scanner.
- 2. Pull gently on the cable strain relief to ensure the cable is installed.

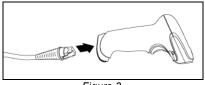

Figure 3.

Removal

Turn off power to the host system before removing the cable from the scanner.

- 1. Locate the small pinhole on the front side of the scanner near the end of the handle.
- 2. Bend an ordinary paper clip into the shape shown.
- Insert the paper clip (or other small metallic pin) into the small pinhole. There will be a faint 'click' when the connector's lock releases.
- 4. Pull gently on the cable's strain relief to remove the cable.

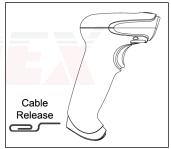

Figure 4.

Scanner Operation

Audible Indicators

When the scanner is operational, the scanner provides audible feedback to indicate the status of the scanner and the last scan. Eight settings are available for the tone of the beep (normal, six alternate tones and no tone).

One Beep – On Power Up

When the unit powers up, the green LED turns on, then the red LED flashes and the scanner beeps once. The red LED will remain on for the duration of the beep. The scanner is now ready to scan.

One Beep – During Operation

When the scanner successfully reads a bar code, the red LED will flash and the scanner beeps once (if programmed to do so). If the scanner does not beep once and the red light does not flash, then the bar code has not been successfully read.

Three Beeps – During Operation

When entering the configuration mode, the red LED flashes while the scanner simultaneously beeps three times. The red LED continues to flash until the unit exits configuration mode. Upon exiting configuration mode, the scanner beeps three times and the red LED stops flashing.

When configured for communication timeout, three beeps during operation indicates that a communication timeout has occurred.

Visual Indicators

The scanner is equipped with a red LED and green LED, which indicate the scanner's state and the status of the current scan respectively when the unit is in operation.

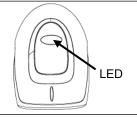

Figure 5. LED Location

Green and Red LEDs Are Off

The LEDs will not be illuminated if the scanner is not receiving power from the host or transformer.

Steady Green

Steady green indicates normal pulse or continuous laser operation. Accompanied by a razzberry tone, a steady green LED indicates that an invalid bar code has been scanned.

Flashing Gree<mark>n</mark>

After a period of inactivity, the ON time of the pulsing laser will be shortened. During this time the green LED will flash. This indicates that the scanner is in a power saver mode. When a bar code enters the laser field, the scanner will wake up and return to normal pulse mode.

Steady Green and Single Red Flash

When the scanner successfully reads a bar code, the red LED will flash and the scanner will beep. If the red LED does not flash and the scanner does not beep, the bar code has not been successfully read.

Steady Green and Steady Red

After a successful read, the scanner transmits the data to the host device. Some communication modes require that the host inform the scanner when data is ready to be received. If the host is not ready to accept the information, the scanner's red LED will remain on until the data can be transmitted.

Steady Green and Continuous Flashing Red

When entering the configuration mode, the red LED will flash, the green LED will turn on and the scanner will beep three times. The red LED will continue to flash and the green LED will stay on until the unit exits the configuration mode.

Failure Modes

One Razzberry Tone – On Power Up

This indicates the scanner has experienced a laser or flipper subsystem failure. Return the unit for repair to an Authorized Service Center.

Continuous Razzberry Tone with no LEDs

If, upon power up, the scanner emits a continuous razzberry tone, then the scanner has an experienced an electronic failure. Return the unit for repair to an Authorized Service Center.

Three Beeps – On Power Up

If the scanner beeps three times on power up, then the non-volatile memory (NovRAM) that holds the scanner configuration has failed. You must return the unit for repair to an Authorized Service Center.

Typical Depth of Field by Bar Code Element Width

		Depth of Field	
Bar Code Element Width		Start (From Scanner Face)	(From Scanner Face)
0.13 mm	5.2 mil	76 mm (3") 127 mm (5"	
0.19mm	7.5 mil	51 mm (2") 203 mm (8")	
0.26 mm	10.4 mil	25 mm (1") 229 mm (9")	
0.33 mm	13 mil	13 mm (0.5") 254 mm (10")	

Troubleshooting Guide

The following guide is for reference purposes only. Contact a customer service representative to preserve the limited warranty terms.

Symptoms	Possible Causes	Solution
All Interfaces		
The unit has no	No power is being supplied to the unit.	Check the transformer, the outlet and power strip. Make sure the cable is plugged into the unit.
LEDs, beep or laser.	No power is being supplied to the unit from host.	Some host systems cannot supply enough current to power the scanner. A power supply may be needed.
At power up the unit beeps two times and alternately flashes the LEDs.	There is a ROM failure.	A flash ROM upgrade is required.
At power up the unit beeps three times.	There is a non- volatile RAM failure.	
At power up there is a continuous razz tone.	There has been a diagnostic failure.	Contact a customer service
At power up there is a razz tone and the green LED flashes.	There is a VLD failure.	representative.
At power up there is a razz tone and both LEDs flash.	There is a scanning mechanism failure.	
The unit scans, communicates and beeps twice.	The same symbol timeout is set too short.	Adjust the same symbol timeout for a longer time.
The unit powers up, but does not beep.	The beeper may be disabled or no tone has been selected.	Enable beeper and select a tone.

Symptoms	Possible Causes	Solution
The unit powers up, but does not scan and/or beep.	The unit is trying to scan a particular symbology that is not enabled.	UPC/EAN, Code 39, interleaved 2 of 5, Code 93, Code 128 and Codabar are enabled by default. Verify the type of bar code being read has been selected.
The unit powers up, but does not scan and/or beep.	The bar code being scanned does not satisfy the configured criteria for character length lock or minimum length.	Verify the bar code being scanned falls into the configured criteria. The scanner defaults to a minimum of three-character bar code.
Serial Emulation U	JSB Interfaces	,
The unit scans a bar code, but locks up after the first scan and the red LED stays on.	The unit is configured to support some form of host handshaking but is not receiving the signal.	If the unit is setup to support ACK/NAK, RTS/CTS, XON/XOFF or D/E, verify that the host cable and host are supporting the handshaking properly.
The unit scans, but the data transmitted to the host is incorrect.	The unit's data format does not match the host system's requirements.	Verify the unit's data format matches that required by the host. Make sure that the unit is connected to the proper host port.
The unit beeps at some bar codes but NOT for others of the same bar code	The bar code may have been printed incorrectly. The unit is not configured correctly for the type of bar code being scanned.	Check if it is a check digit/character/or border problem.
symbology.	The minimum symbol length setting does not work with the bar code.	Check if the correct minimum symbol length is set.
Keyboard Wedge Interface		
The unit scans the bar code but there is no data.	The unit's configuration is not correct.	Make sure the scanner is configured for the appropriate mode.

Symptoms	Possible Causes	Solution
The unit scans but the data is not correct.	The unit's configuration is not correct.	Make sure that the proper PC type AT, PS2 or XT is selected. Verify the correct country code and data format is selected. Adjust the inter-character delay symptom.
The unit is transmitting each character twice.	The unit's configuration is not correct.	Increase the interscan code delay setting. Adjust whether the F0 break is transmitted. It may be necessary to try this in both settings.
Alpha characters show as lower case.	The computer is in <i>Caps Lock</i> mode.	Enable the <i>Caps Lock</i> detect feature of the scanner to detect whether the PC is operating in Caps Lock.
Everything works except for a couple of characters.	These characters may not be supported by that country's key look up table.	Try operating the scanner in Alt mode.
	Gol	JEX

Configuration Introduction

Your new scanner has been factory configured with a set of default parameters. Since many host systems have unique formats and protocol requirements, a wide range of configurable features that may be selected using this bar code based configuration tool are provided. Once the configuration is completed, the scanner stores the settings in nonvolatile memory (NOVRAM). NOVRAM saves the settings when the power is off.

Note: Bar code descriptions marked with an asterisk (*) define a feature that is a factory default. Bar codes marked with a tilde (~) require the Multi-Code configuration method.

Bar Code Configuration Methods

Scanners can be bar code configured in two ways: the *Single-Code Method* and the *Multi-Code Method*.

Single-Code Method

Most features can be enabled or disabled using the Single-Code Method.

- 1. Power up the scanner.
- 2. Scan the bar code for the desired feature.
- 3. The scanner will emit a multi-toned beep to indicate the configuration has been saved to NOVRAM.

Multi-Code Method

All features can be enabled or disabled using the Multi-Code Method. A feature marked with a tilde (~) requires the Multi-Code Method.

- 1. Power up the scanner.
- 2. Scan the Enter/Exit Configuration Mode bar code (3 beeps).
- Scan the bar code for the desired feature (1 beep). Multiple features can be enabled/disabled before scanning the enter/exit configuration mode bar code.
- 4. Scan the Enter/Exit Configuration Mode bar code (3 beeps) and save the new configuration. To abort a configuration change, power off the scanner before scanning the Enter/Exit code.

Enter/Exit Configuration Mode

Returning to Factory Defaults

Scan the *Recall Defaults* bar code to erase all previous settings and return the scanner to its factory default communication protocol.

Code Types and Decode Rules

Bar code descriptions marked with an asterisk (*) define a feature that is a factory default. Bar codes marked with a tilde (\sim) require the Multi-Code configuration method.

2 of 5 Codes ITF Symbol Length Lock 1 – To specify a first ITF symbol length lock, scan this bar code and the appropriate code byte sequence located on page 23. ITF Symbol Length Lock 2 – To specify a second ITF symbol length lock, scan this bar code and the appropriate code byte sequence located on page 23. ITF Symbol Length Lock 2 – To specify a second ITF symbol length lock, scan this bar code and the appropriate code byte sequence located on page 23. ITF Minimum Symbol Length – To specify a minimum number of ITF characters to be decoded, scan the appropriate code byte sequence located on page 23.

Additional Decode Features

 Minimum Symbol Length – Single-line default is 3. Combine this code with the proper code bytes (on page 23), to specify the minimum number of characters in all non-UPC/EAN bar codes.

 Symbol Length Lock – Combine this code with the proper code bytes, to lock the bar code's length into place.

Supplements

Enable Bookland (979) Supplement Required
 Disable Bookland (979) Supplement Required
Enable Bookland (978) Supplement Required
* Disable Bookland (978) Supplement Required
Enable 977 (2 Digit) Supplement Required – The scanner will require a 2 digit supplement to be scanned when an EAN-13 code begins with 977.
* Disable 977 (2 Digit) Supplement Required
Enable ISBN Check Digit Transmission
Disable ISBN Check Digit Transmission
Enable Bookland to ISBN Conversion
* Disable Bookland to ISBN Conversion

Scanner Operation

Redundant Scans

* **0 Redundant Scans** – Requires 1 good decode for a *good scan.*

1 Redundant Scan – Requires 2 consecutive decodes of the same bar code data for a *good scan*.

Data Transmission Delays

Use these codes to select the amount of delay between sending data characters from the scanner to the host. This helps prevent the scanner from overflowing host-input buffers.

	1 msec Intercharacter Delay
	10 msec Intercharacter Delay
	25 msec Intercharacter Delay
	Variable msec Intercharacter Delay – Scan this bar code and a sequence of code bytes on page 23 to set the delay between characters sent to the host system (range from 1 to 255 msecs.).
Laser/Scan Mode	S
	Enable Automatic Scanning
	Continuous Blinky Scan – The laser blinks continuously and the IR is inactive.
	Enable Manual Trigger – The laser activates when the CodeGate button is pressed.

Prefixes/Suffixes

Scan the Enter Configuration Mode bar code before trying to set these features (see the Multi-Code Method on page 12.)

User Configurable Prefixes, All Data

- Configurable Prefix Character #1 A prefix ID can be added and assigned for data transmission. Use this code with a code byte sequence, on page 23, which represents the desired character.
 - Configurable Prefix Character #2 Assigns a second configurable prefix character.

Standard Prefix Characters

Enable STX Prefix – The scanner will transmit a Start of TeXt (ASCII 02H) before each bar code.

- Disable STX Prefix

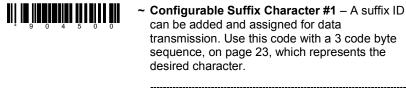

Standard Suffix Characters

* Enable CR Suffix – The scanner transmits a carriage return after each bar code.
 Disable CR Suffix
 Disable CR Suffix
 * Enable LF Suffix – The scanner transmits a line feed after each bar code. Disabled when keyboard wedge defaults are loaded.
 Disable LF Suffix

Enable Tab Suffix – The scanner will transmit a TAB (ASCII 09H) after each bar code.
* Disable Tab Suffix
Enable ETX Suffix – The scanner will transmit End of TeXt (ASCII 03H) after the bar code date.
* Disable ETX Suffix
Enable UPC Suffix ID – The scanner will transmit a suffix after any UPC/EAN bar code. The suffixes are A (UPC-A), E (UPC-E), F (EAN-13) and F (EAN-8).
* Disable UPC Suffix ID
Enable NCR Suffix Character

User Configurable Suffixes, All Data

Note: Scan the Enter/Exit Configuration mode code before trying to set this feature. Refer to Multi-Code Method on page 12.

 Configurable Suffix Character #2 – Assigns a second configurable suffix character.

Code Formatting

UPC/EAN Formatting

*	Transmit UPC-A Check Digit
	Do Not Transmit UPC-A Check Digit
	Transmit UPC-E Check Digit
*	Do Not Transmit UPC-E Check Digit
	Expand UPC-E to 12 Digits – Expand UPC-E bar codes to the 12 digit equivalent, UPC-A bar codes.
*	Do Not Expand UPC-E to 12 Digits
*	Send Number System on Expanded UPC E
	Do Not Send Number System on Expanded UPC E
	Enable GTIN Formatting
*	Disable GTIN Formatting
	Convert UPC-A to EAN-13 – The scanner converts UPC-A to EAN-13 by transmitting a leading zero before the bar code.
*	Do Not Convert UPC-A to EAN-13

Transmit Lead Zero on UPC-E – This option will transmit a zero before each UPC-E bar code.

Do Not Transmit Lead Zero on UPC-E

Convert EAN-8 to EAN-13 – The scanner will transmit five zeros before the bar code to convert EAN-8 to EAN-13.

[•] Do Not Convert EAN-8 to EAN-13

Keyboard

Enable Keyboard Emulation

Load Keyboard Wedge Defaults – Loads the default settings for keyboard wedge mode.

Enable Keyboard Wedge Emulation – Use this with an external keyboard. Transmit in wedge made to allow standard PC keyboards to communicate when no bar code data is available.

Code Bytes Usage

The scanner must be in Configuration Mode for the features requiring code bytes for configuration. The Enter/Exit Configuration Mode bar code must be scanned before starting the configuration cycle. User configurable prefix/suffix characters can then be saved by scanning the 3 digit decimal equivalent of the ASCII character into the appropriate character location with the code byte bar codes.

Example: To add an asterisk (*) as a Prefix, scan the bar codes.

- 1. Enter/Exit Configuration Mode (3 beeps)
- 2. Configurable Prefix #1
- (1 beep)
- 3. Code Byte 0
- (1 beep)
- 4. Code Byte 4
- (2 beeps) (3 beeps)
- 5. Code Byte 2
- (3 bee
- 6. Enter/Exit Configuration Mode (3 beeps)

Limited Warranty

Seller warrants its products to be free from defects in materials and workmanship and to conform to seller's published specifications applicable to the products purchased at the time of shipment. This warranty does not cover any seller product which is (i) improperly installed or used; (ii) damaged by accident or negligence, including failure to follow the proper maintenance, service, and cleaning schedule; or (iii) damaged as a result of (A) modification or alteration by the purchaser or other party, (B) excessive voltage or current supplied to or drawn from the interface connections, (C) static electricity or electro-static discharge, (D) operation under conditions beyond the specified operating parameters, or (E) repair or service of the product by anyone other than seller or its authorized representatives.

This warranty shall extend from the time of shipment for the duration published by seller for the product at the time of purchase ("Warranty Period"). Any defective product must be returned (at purchaser's expense) during the Warranty Period to seller factory or authorized service center for inspection. No product will be accepted by seller without a Return Materials Authorization, which may be obtained by contacting seller. In the event that the product is returned to seller or its authorized service center within the Warranty Period and seller determines to its satisfaction that the product is defective due to defects in materials or workmanship, seller, at its sole option, will either repair or replace the product without charge, except for return shipping to seller.

EXCEPT AS MAY BE OTHERWISE PROVIDED BY APPLICABLE LAW, THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER COVENANTS OR WARRANTIES, EITHER EXPRESSED OR IMPLIED, ORAL OR WRITTEN, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT.

SELLER'S RESPONSIBILITY AND PURCHASER'S EXCLUSIVE REMEDY UNDER THIS WARRANTY IS LIMITED TO THE REPAIR OR REPLACEMENT OF THE DEFECTIVE PRODUCT WITH NEW OR REFURBISHED PARTS. IN NO EVENT SHALL SELLER BE LIABLE FOR INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, AND, IN NO EVENT, SHALL ANY LIABILITY OF SELLER ARISING IN CONNECTION WITH ANY PRODUCT SOLD HEREUNDER (WHETHER SUCH LIABILITY ARISES FROM A CLAIM BASED ON CONTRACT, WARRANTY, TORT, OR OTHERWISE) EXCEED THE ACTUAL AMOUNT PAID TO SELLER FOR THE PRODUCT. THESE LIMITATIONS ON LIABILITY SHALL REMAIN IN FULL FORCE AND EFFECT EVEN WHEN SELLER MAY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH INJURIES, LOSSES, OR DAMAGES. SOME STATES, PROVINCES, OR COUNTRIES DO NOT ALLOW THE EXCLUSION OR LIMITATIONS OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU. All provisions of this Limited Warranty are separate and severable, which means that if any provision is held invalid and unenforceable, such determination shall not affect the validity of enforceability of the other provisions hereof. Use of any peripherals not provided by the manufacturer may result in damage not covered by this warranty. This includes but is not limited to: cables, power supplies, cradles, and docking stations. Seller extends these warranties only to the first end-users of the products. These warranties are non-transferable.
