2-2-2. Cash Drawer Connector
The printer can operate two cash drawers with a 6 pin RJ-11 modular connector.
The driver is capable of supplying a maximum current of 1.0A/24VDC for 510ms or less when not printing.

Caution : To avoid an overcurrent, the resistance of the drawer kick-out solenoid must be 24  $\,\Omega\,$  or more.

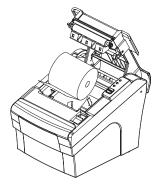

#### 2-3. Loading the Roll Paper

Notes: Be sure to use paper rolls that meet the specifications. Do not use paper rolls that have the paper glued to the core because the printer cannot detect the paper end correctly. (Turn off power switch)

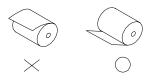

- 1. Make sure that the printer is not receiving data; Otherwise, data may be lost.
- 2. Open the paper roll cover by pushing down the cover open button.

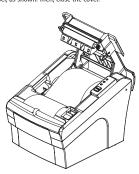

- 3. Remove the used paper roll core if there is one inside.
- 4. Insert new paper roll as shown.

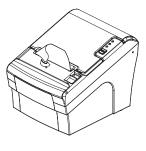

6. Pull out a small amount of paper, as shown. Then, close the cover.

7. Tear off the paper as shown.

#### 2-4. Dip Switch Setting

The printer is set up at the factory to be appropriate for almost all users. On the other hand, offers some more settings for users with special requirements. It has DIP switches that allow you to change communication setting, such as handshaking and parity

check, as well as print density.

Your printer has two sets of DIP switches. The functions of the switches are shown in the following

tables.

♣Note : Power off. And open the cover of Dip Switch and change setting.

## 2-4-1. Serial Interface Specification

## DIP Switch Setting (Standard)

-				
	SW FUNCTION		ON	OFF
	2 Hexadecimal		HEXDUMP	NORMAL
Γ	5	Cut Mode	Full Cut	Partial Cut
ſ	6	Handshaking	XON/XOFF	DTR/DSR
	8	Paper Low Mode	Paper Low Detect	Do not detect

#### Print Density

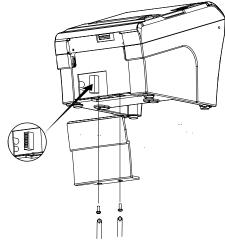

Function	SW-3	SW-4
Low Power	ON	ON
Normal	OFF	ON
Normal	ON	OFF
Dark	OFF	OFF

#### Baud rate selection

Transmission Speed	SW-9	SW-10			
115200 BPS	ON	ON			
9600 BPS	OFF	ON			
19200 BPS	ON	OFF			
38400BPS	OFF	OFF			

Turn off the printer while removing the DIP switch cover to prevent an electric short, which can damage the printer.

- Make sure the printer is turned off.
   Remove the screw from the DIP switch cover. Then, take off the DIP switch cover as shown in the illustration below.

3. Set the switches using a pointed tool, such as tweezers or a small screwdriver. 4. Replace the DIP switch cover. Then, secure it with the screw.

The new settings take effect when you turn on the printer.

#### **♣** CAUTION:

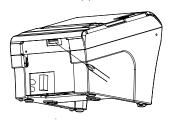

When the paper is jammed with cutter, the top cover might be stuck. In this case, repeat power on and off several times.

If the top cover is still stuck, please follow the steps to release the papers from jamming.

- Make sure the printer is turned off.
   Remove the screw from the DIP switch cover. Then, take off the DIP switch cover as shown in the illustration below.

3. Turn screw with drivers to a direction until paper is released from the cutter.

# 3. Control panel and other functions

#### 3-1. Control panel

You can control the basic paper feeding operations of the printer with the button on the control panel. The indicator lights help you to monitor the printer status.

#### Control Panel

Button
The button can be disabled by the ESC c 5 command.

Press the FEED button once to advance paper one line. You can also hold down the FEED button to feed paper continuously.

**3-2.** Error indicators
This section explains the different patterns signaled by the three LED indicators located on the top cover of the printer.

STATUS	PAPER	ERROR	POWER	REMARKS	
SIAIUS	RED	RED	GREEN		
Power off	OFF	OFF	OFF	Normal power is not supplied to the printer	
Power on	OFF	OFF	ON	Normal power is supplied to the printer	
On line	OFF	OFF	ON	Normal error-free mode	
Cover open	OFF	ON	ON	Close cover	
Paper empty	OFF	ON	ON	Insert new paper roll	
Paper near end	ON	OFF	ON	Paper is low	
Test mode	OFF	OFF	ON	Ignored error led	

## 4. Self Test

The self-test lets you know if your printer is operating properly. It checks the control circuits, printer mechanisms, print quality, ROM version and DIP switch settings. This test is independent of any other equipment or software.

- Running the self test

  1. Make sure the printer is turned off and the printer cover is closed properly.
- While holding down the FEED button, turn on the printer using the switch on the front of the printer to begin the self-test. The Self Test prints the printer settings and then prints the following, Cuts the paper, and pauses. (Error LED On)

#### Self-test printing Please press the PAPER FEED button.

- Press the FEED button to continue printing.
   The printer prints a pattern using the built-in character set.
- 4. The self test automatically ends and cuts the paper after printing the following.

#### \*\*\* Completed \*\*\*

The printer is ready to receive data as soon as it completes the self-test.

# 5. Hexadecimal Dump

This feature allows experienced users to see exactly what data is coming to the printer. This can be

useful in finding software problems.

When you turn on the hex dump function, the printer prints all commands and other data in hexadecimal format along with a guide section to help you find specific commands.

#### To use the hex dump feature, follow these steps

 After you make sure that the printer is off and Dip s/w 1-2 is ON, turn on the printer.
 Run any software program that sends data to the printer. The printer prints "Hexadecimal Dump" and then all the codes it receives in a two-column format. The first column contains the hexadecimal codes and the second column gives the ASC II characters that correspond to the codes.

Hexadecimal Dump

18 21 00 18 26 02 40 40 .!..&.@@

18 25 01 18 63 34 00 18 .%...c4 ..

41 42 43 44 45 46 47 48 ABCDEFGH

☐ A period (.) is printed for each code that has no ASC II equivalent.

3. Turn off the printer, and make sure that Dip sw 1-2 off. 4. Turn on the printer.
